

## Barriers-to-Objectives-Weighting method

for the quantification of sustainable and transformational mitigation impacts

Step 1: Quantify technical mitigation potential Step 2: Identify barriers to mitigation action

Step 3: Weight the Barriers

Step 4: Calculate the avoided GHG emissions through overcoming a barrier

# Thank you for your time!

### Challenge of sustainable development

- You only know afterwards if some action had sustainable and transformational impact
- How to quantify transformational and sustainable mitigation impacts?

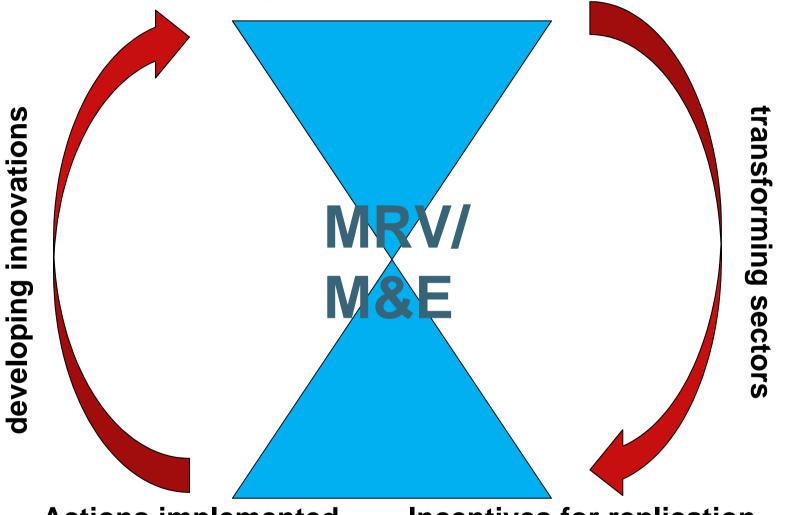

#### Challenge of MRV

- Global climate change requires a global regime (top-down)
- Implementation must be delivered on the ground (bottom-up)
- Global tracking of individual actions necessary for 2°C path
- Individual activities to harness opportunities and partnerships come from the ground
- How to make ends meet?

11/09/2013

Tracking of aggregated emission reductions at national level

National policies upscale individual giz Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) Gmbh

Actions implemented by individual actors 11.05 driven by opportunities Incentives for replication according to (international) benchmarks

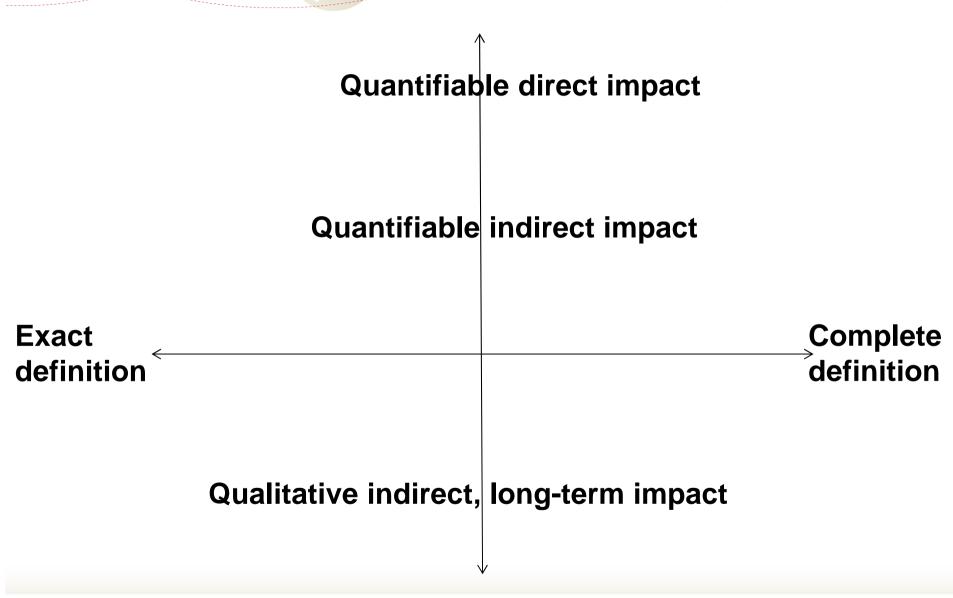

#### What makes changes transformational?

Changes must reach a critical mass: the tipping point

- Connecting the relevant actors
  - Innovators, who invent and introduce the change
  - Connectors, who spread the innovation
  - Salesmen, who convince others to take up the innovation
- Changes must fit the context of those who apply the innovation
- Changing the social and economic environment

## **Continuum of mitigation impacts**

MRV originates from the international climate negotiations:

COP13, Bali 2007: decision to enhance mitigation actions "...NAMAs by developing country Parties in the context of sustainable development, supported and enabled by technology, financing and capacity-building, in a measurable, reportable and verifiable manner."
