Kelly Levin
World Resources Institute

NDC Regional Dialogue for LAC
Costa Rica, 19-21 July 2016

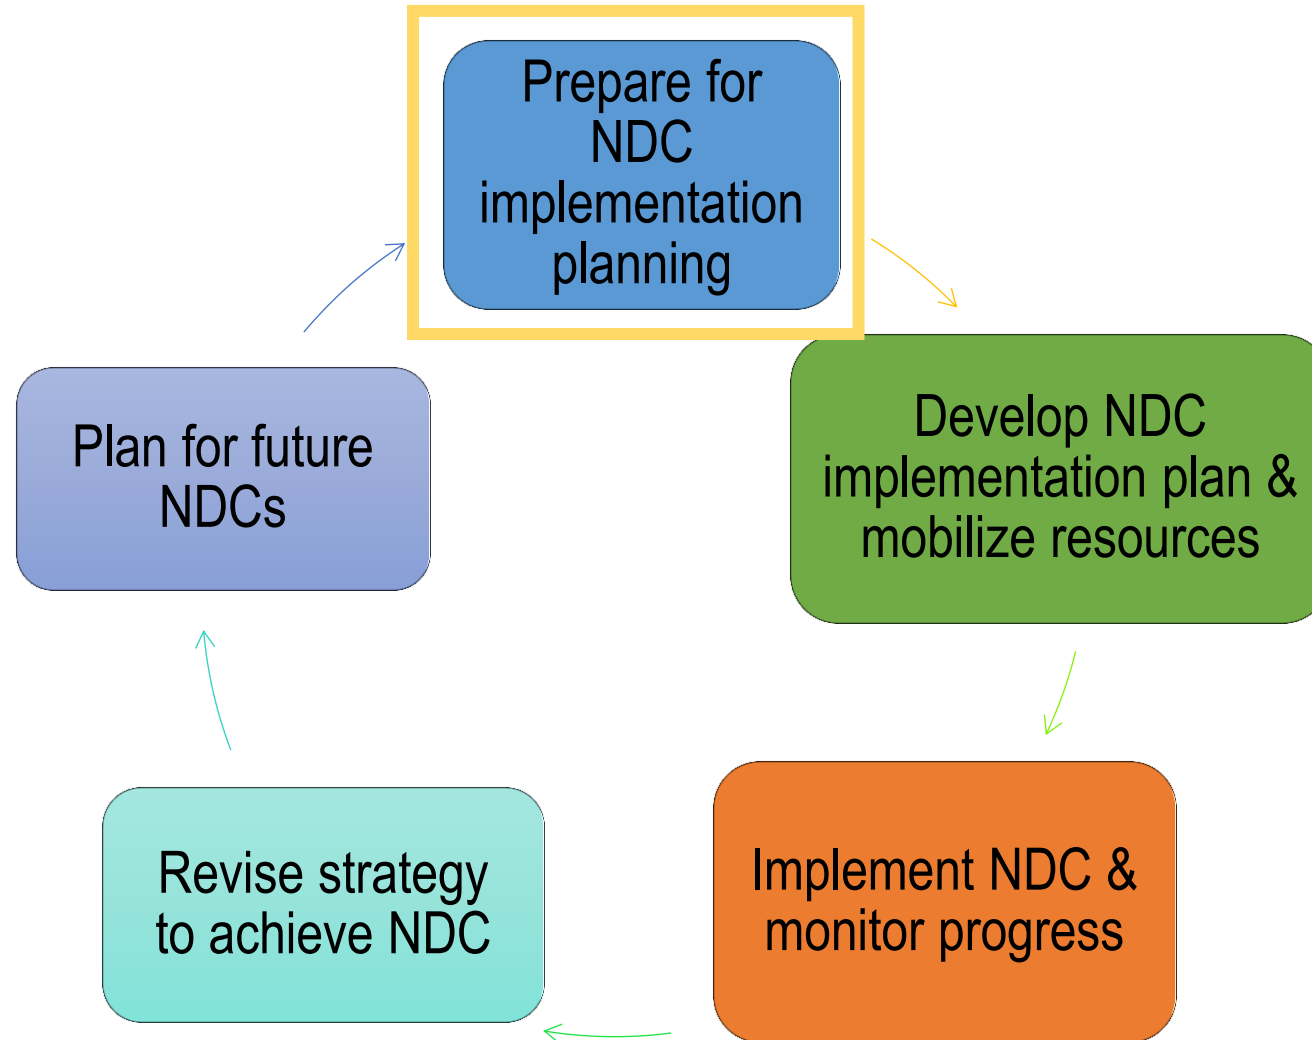

Notes

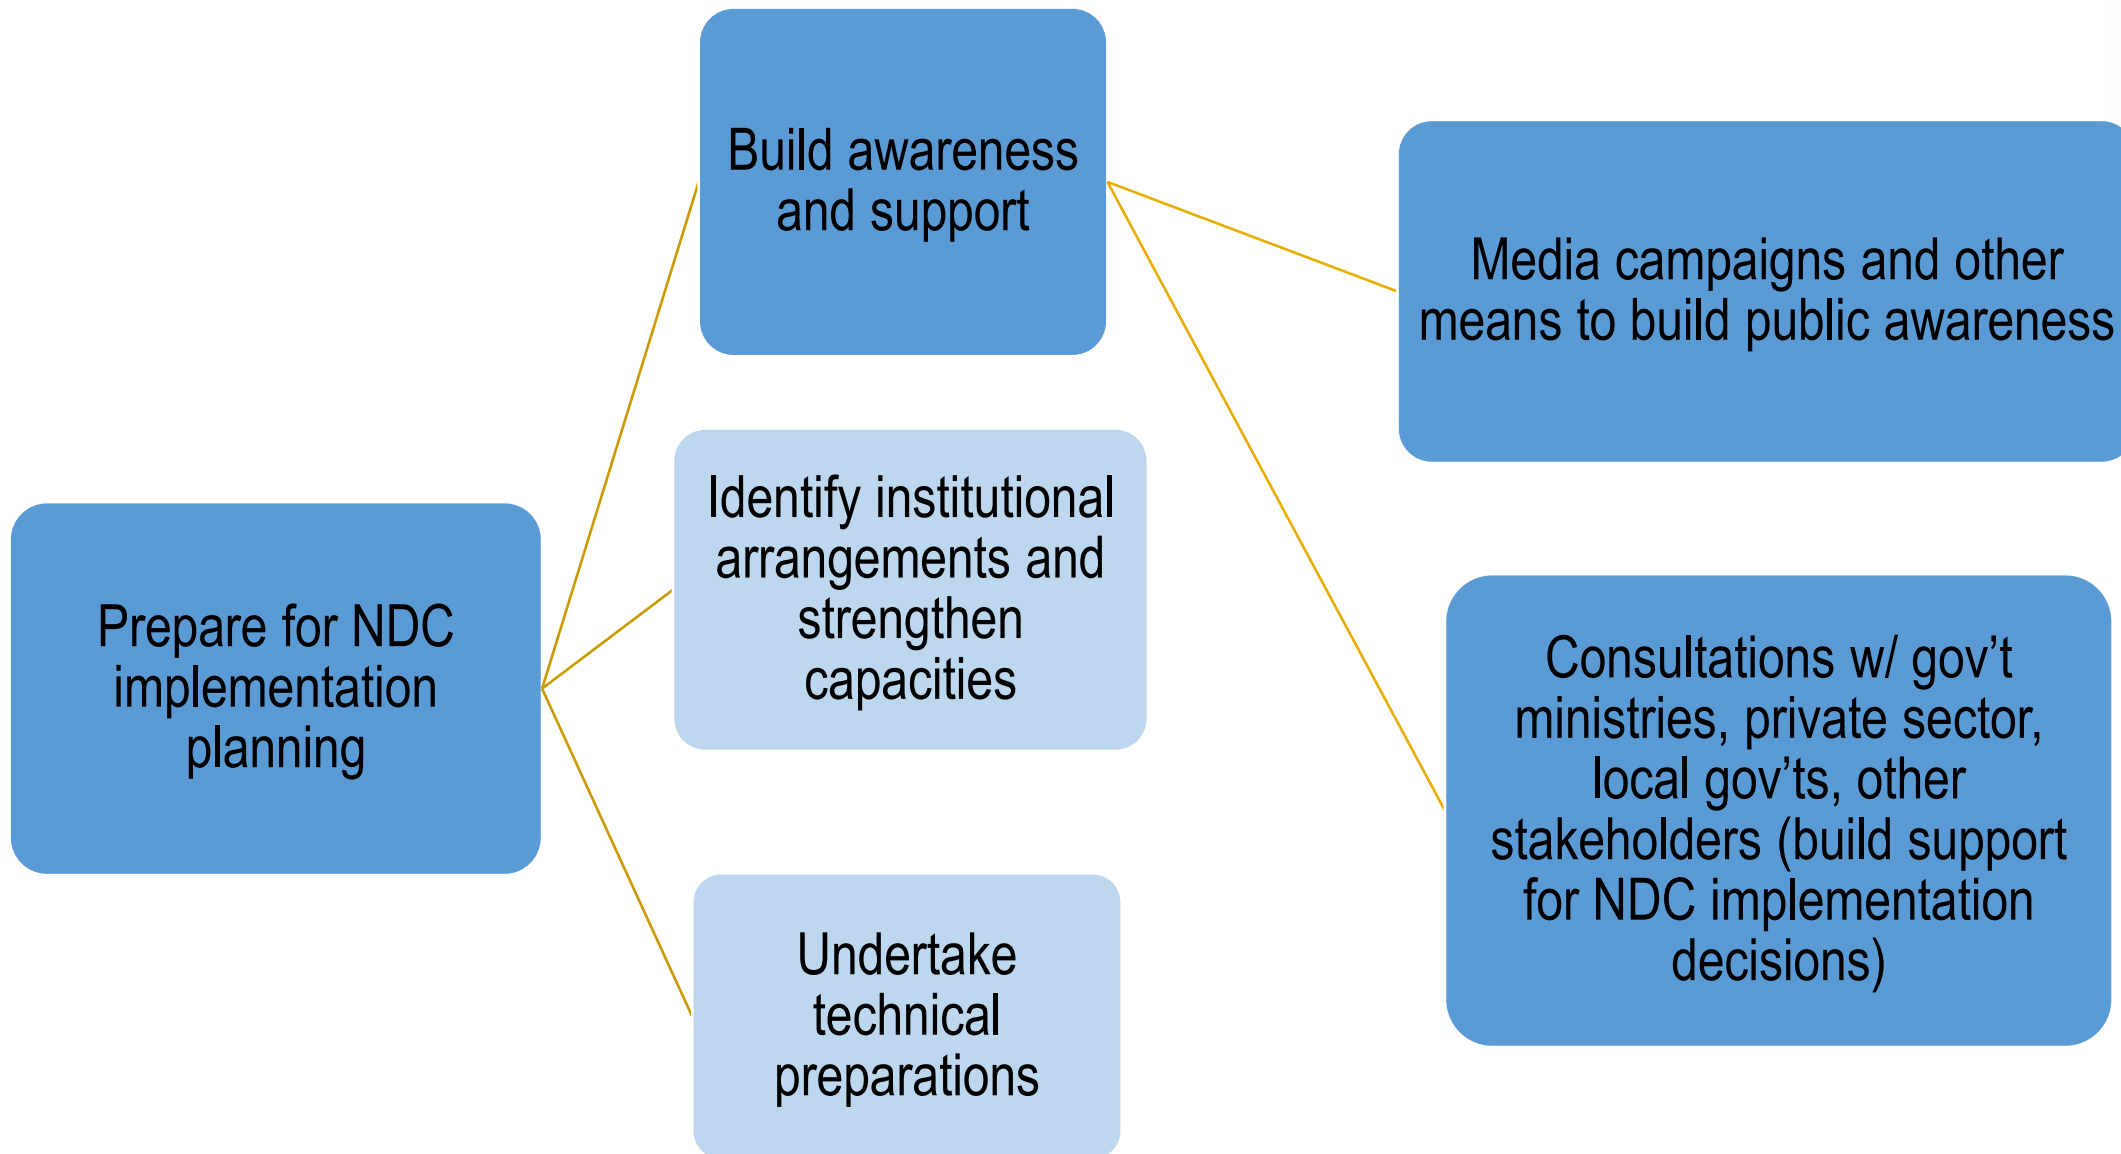

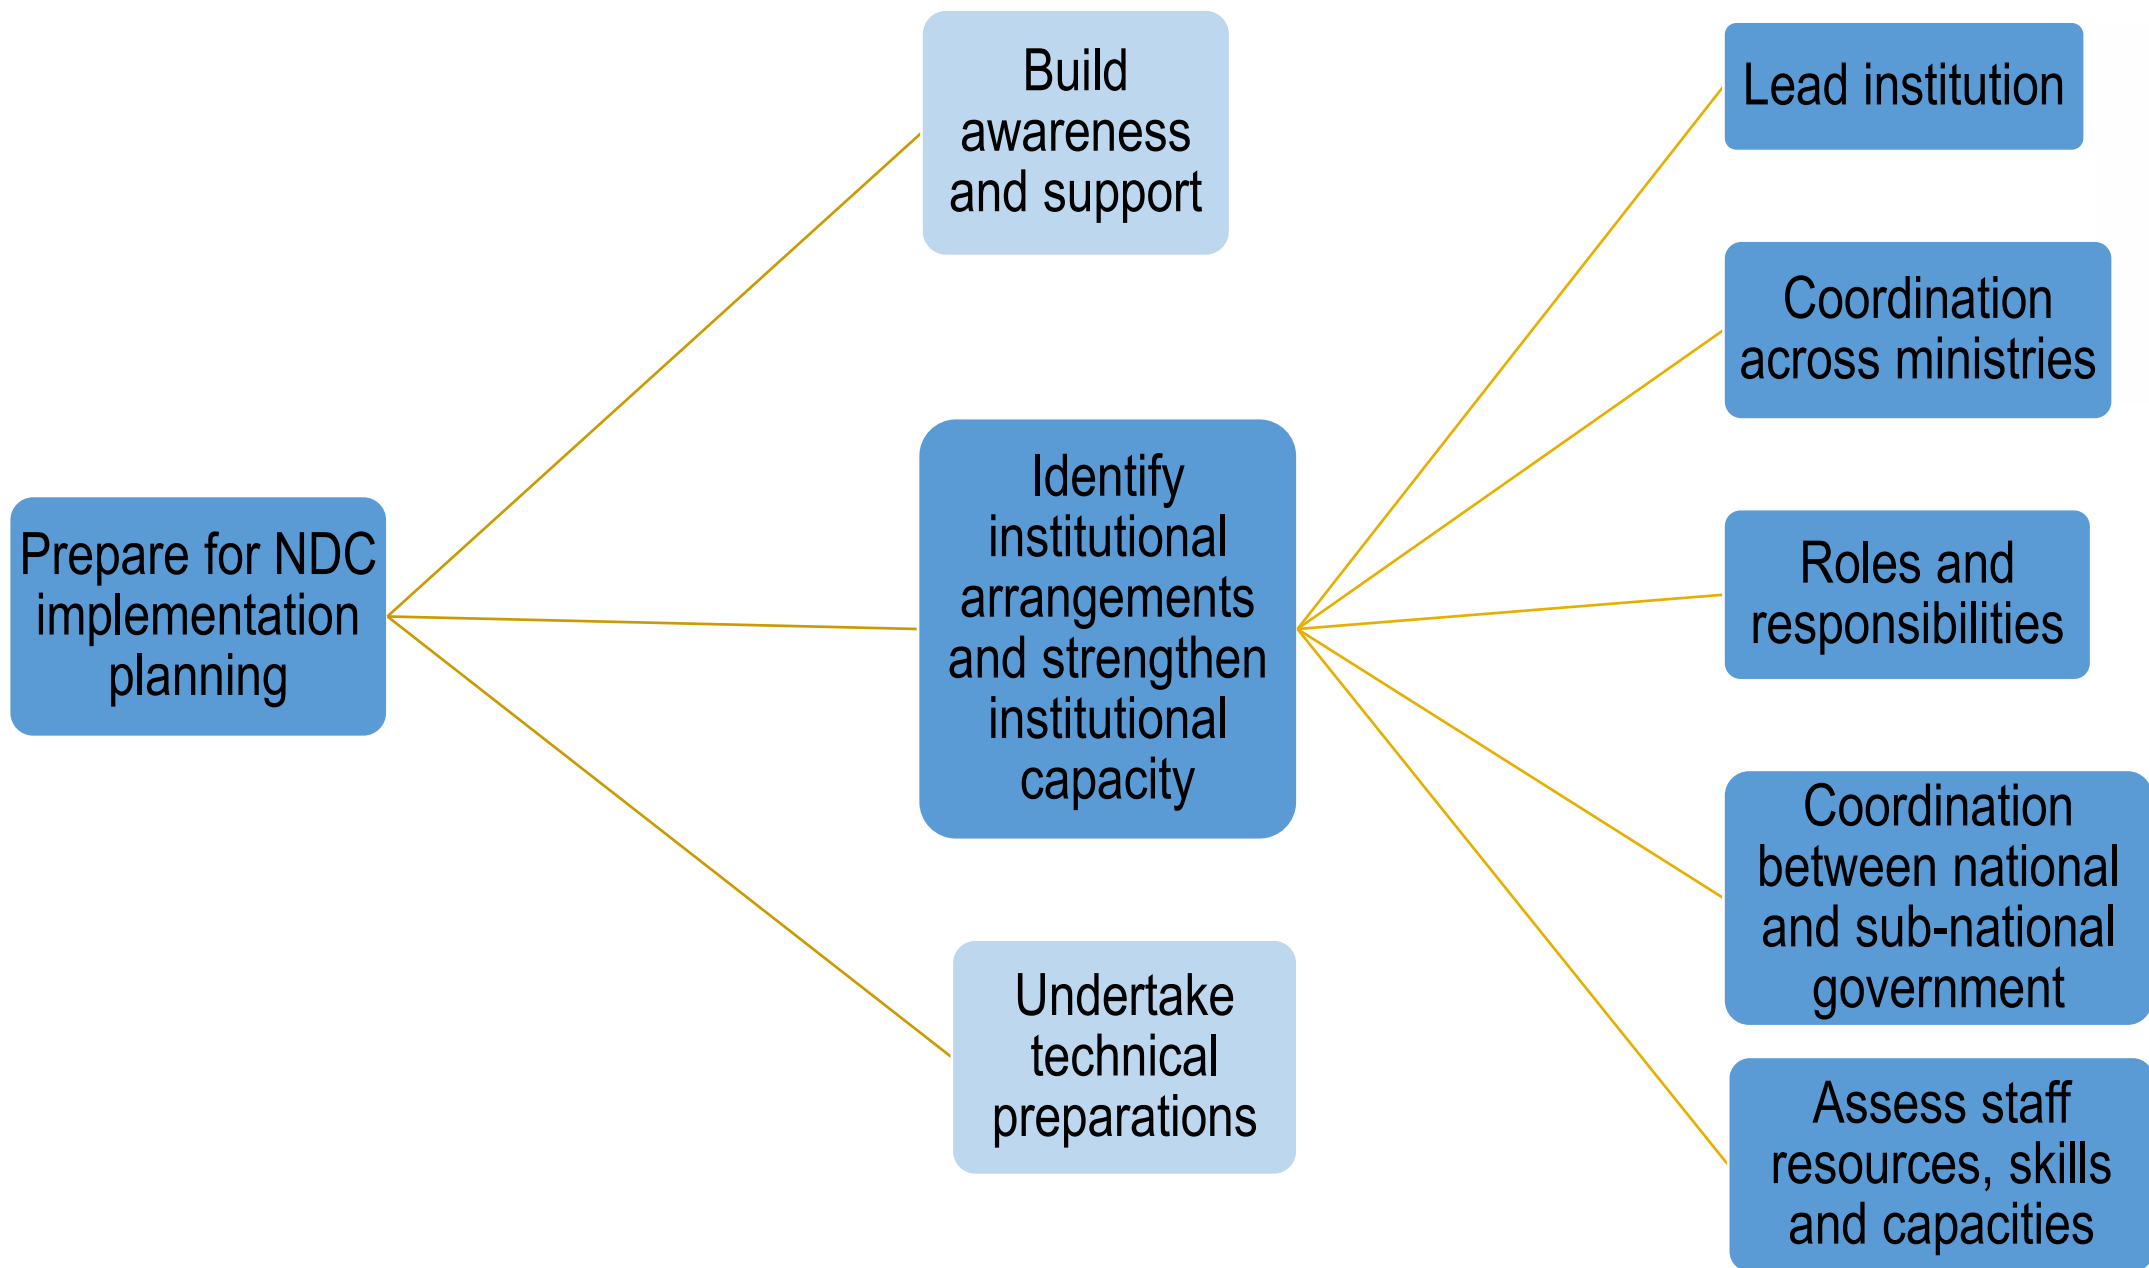

- This is a draft framework, based on early thinking by **UNDP and WRI**
- **Many ways** to think about how to proceed with implementation
- There is **no "right" order** for the steps of implementation
- Not all planning and implementation activities will pertain to all countries; **depends on (I)NDC and national circumstances**
- Mitigation concepts focus on (I)NDCs with economy-wide targets, but many steps the same for non-GHG targets or policies & actions
- Interested in **countries' feedback**
 - This will contribute to possible development of more detailed guidance (building on last year's guidance document ***Designing and Preparing INDCs*** and recent **UNDP survey** on support needs)

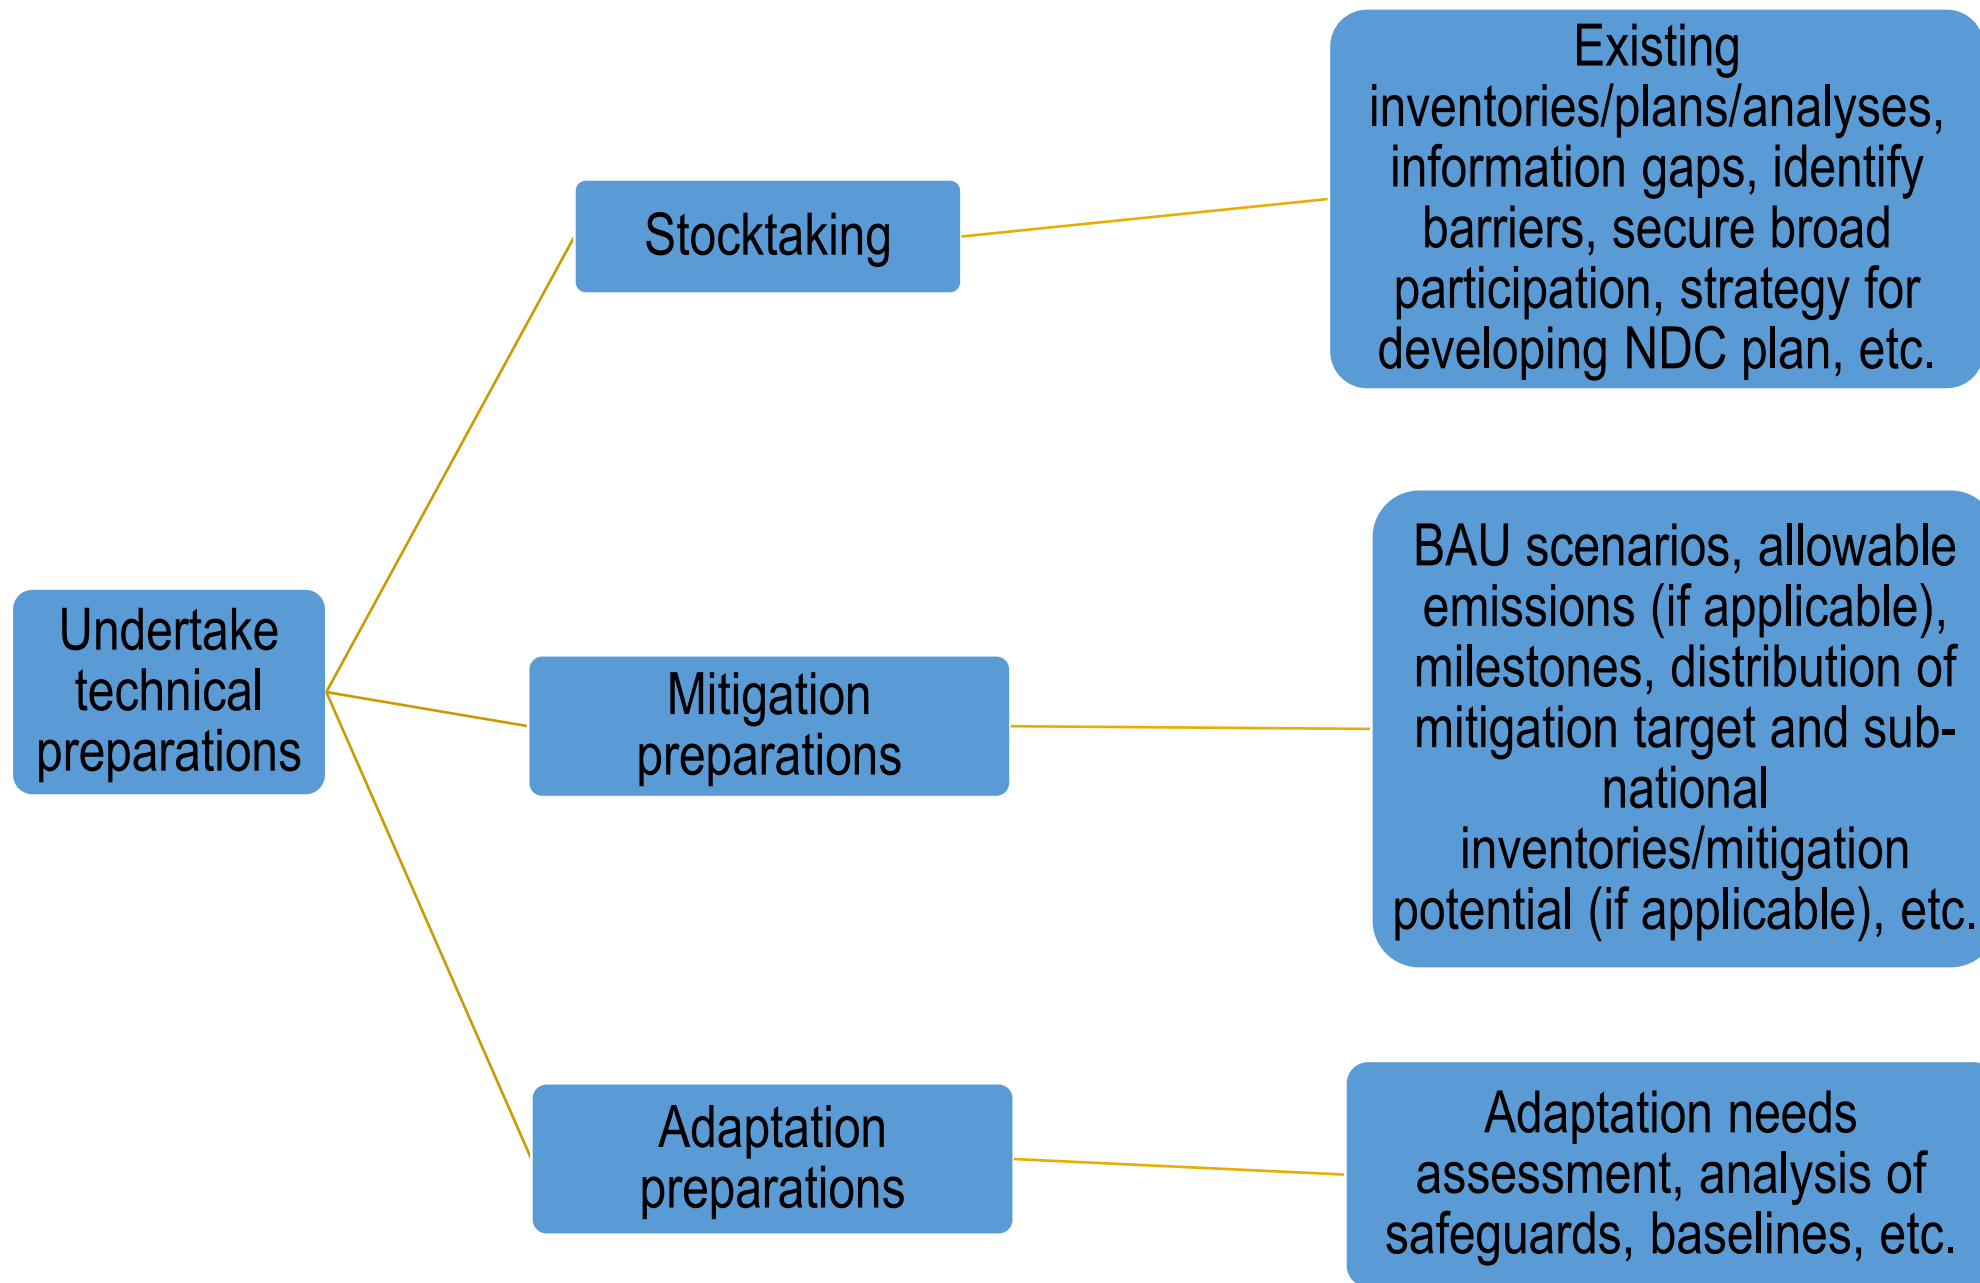

Steps/Stages of NDC Implementation

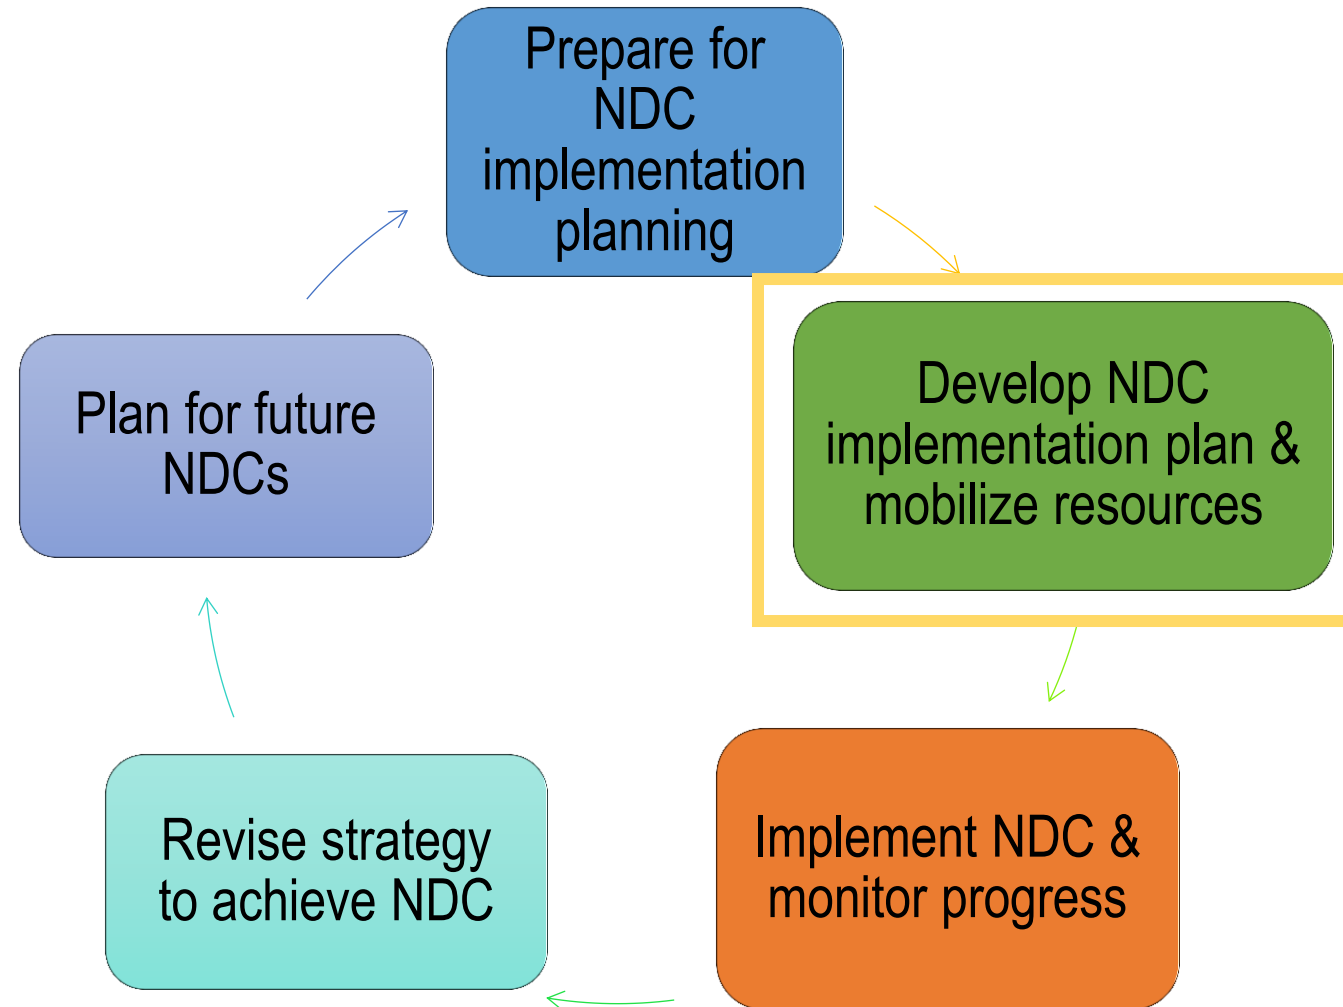

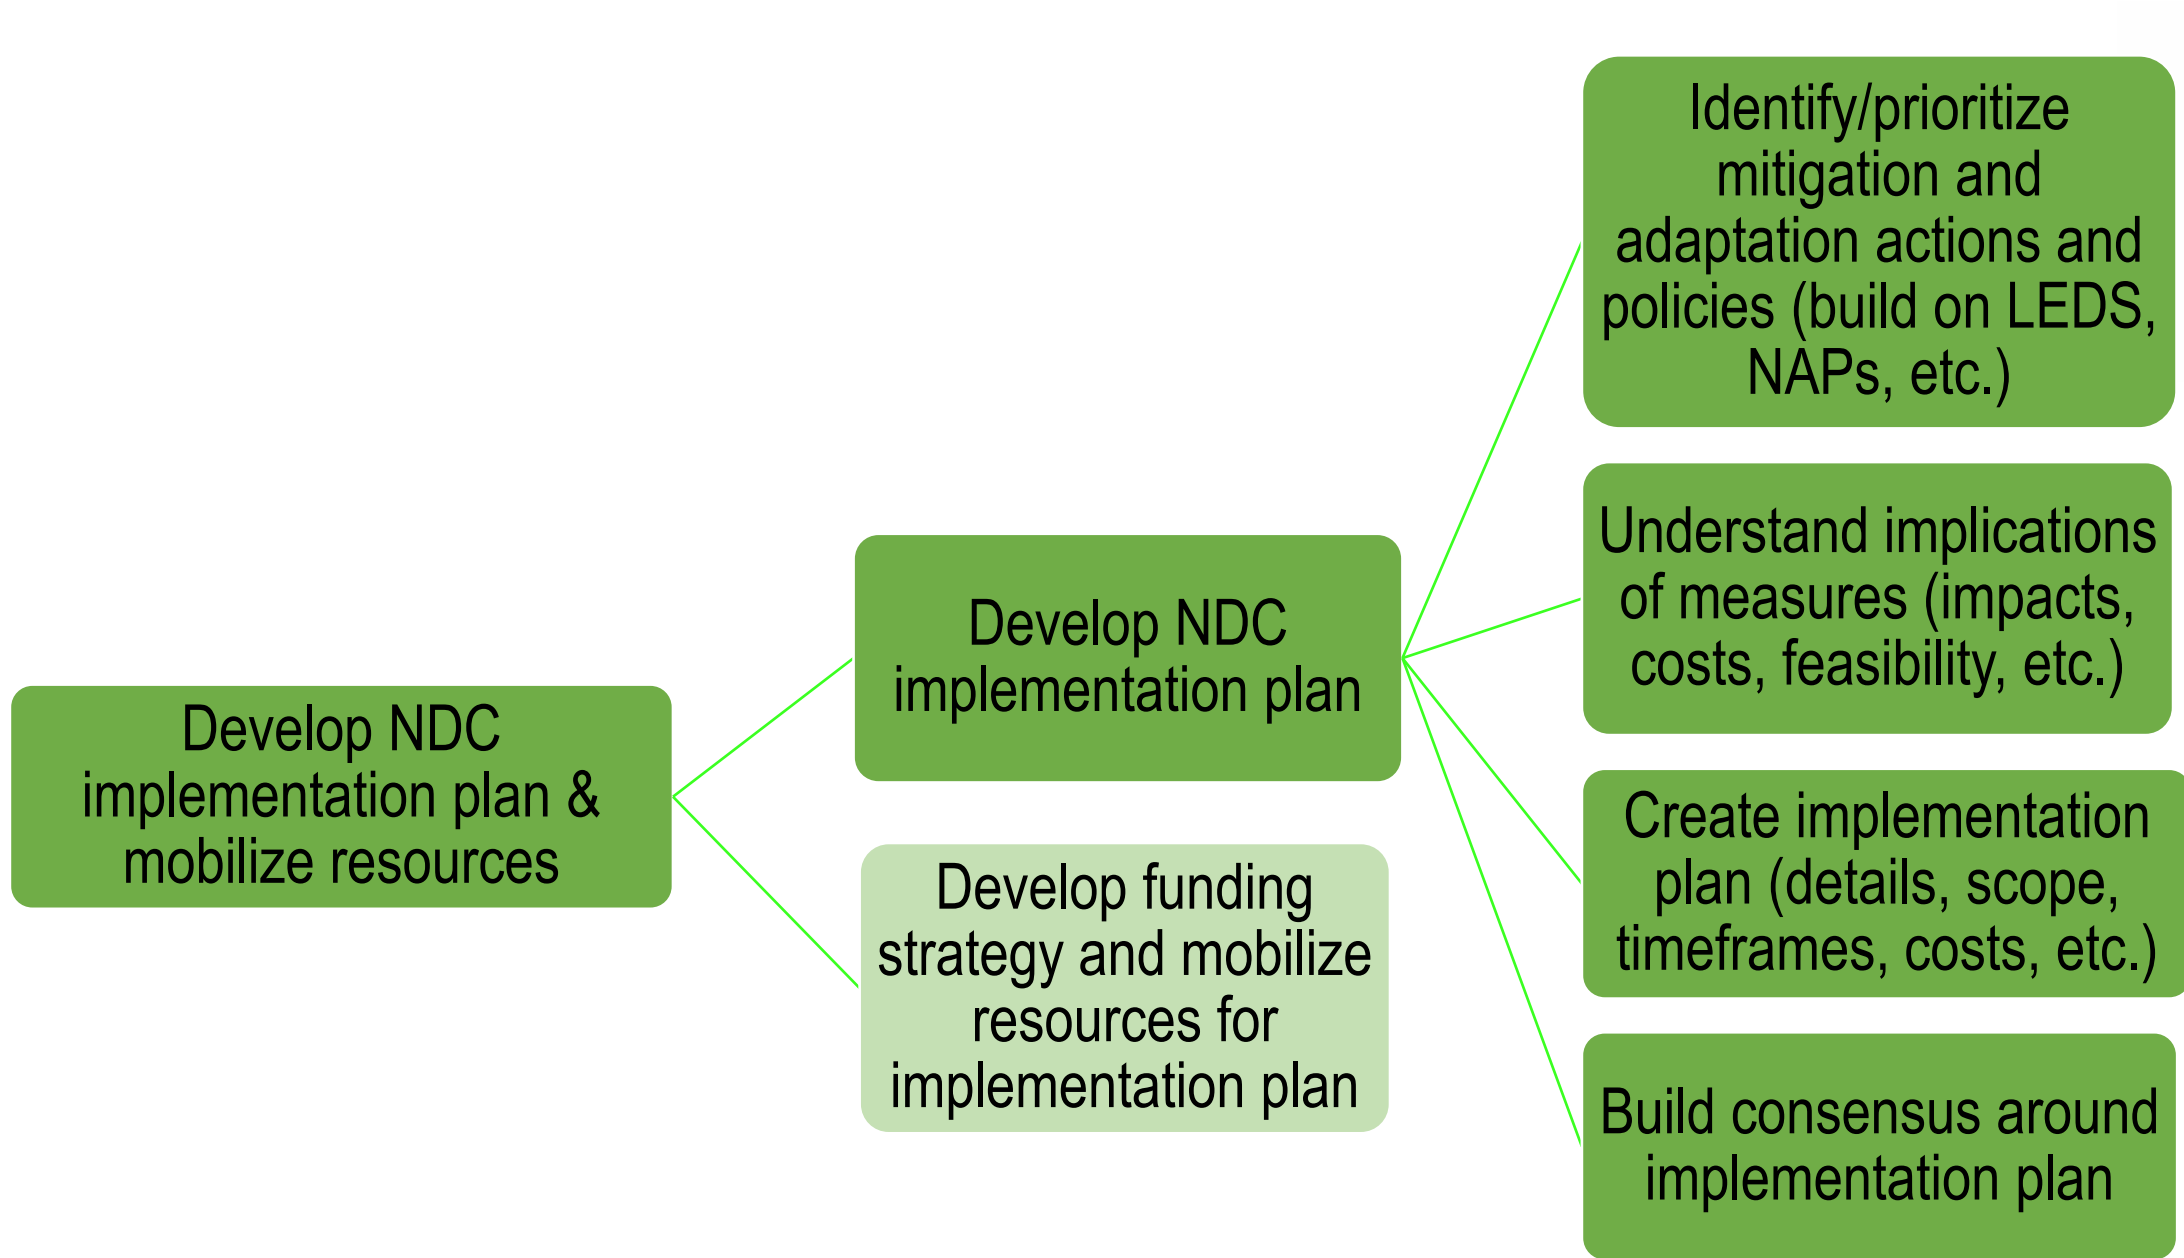

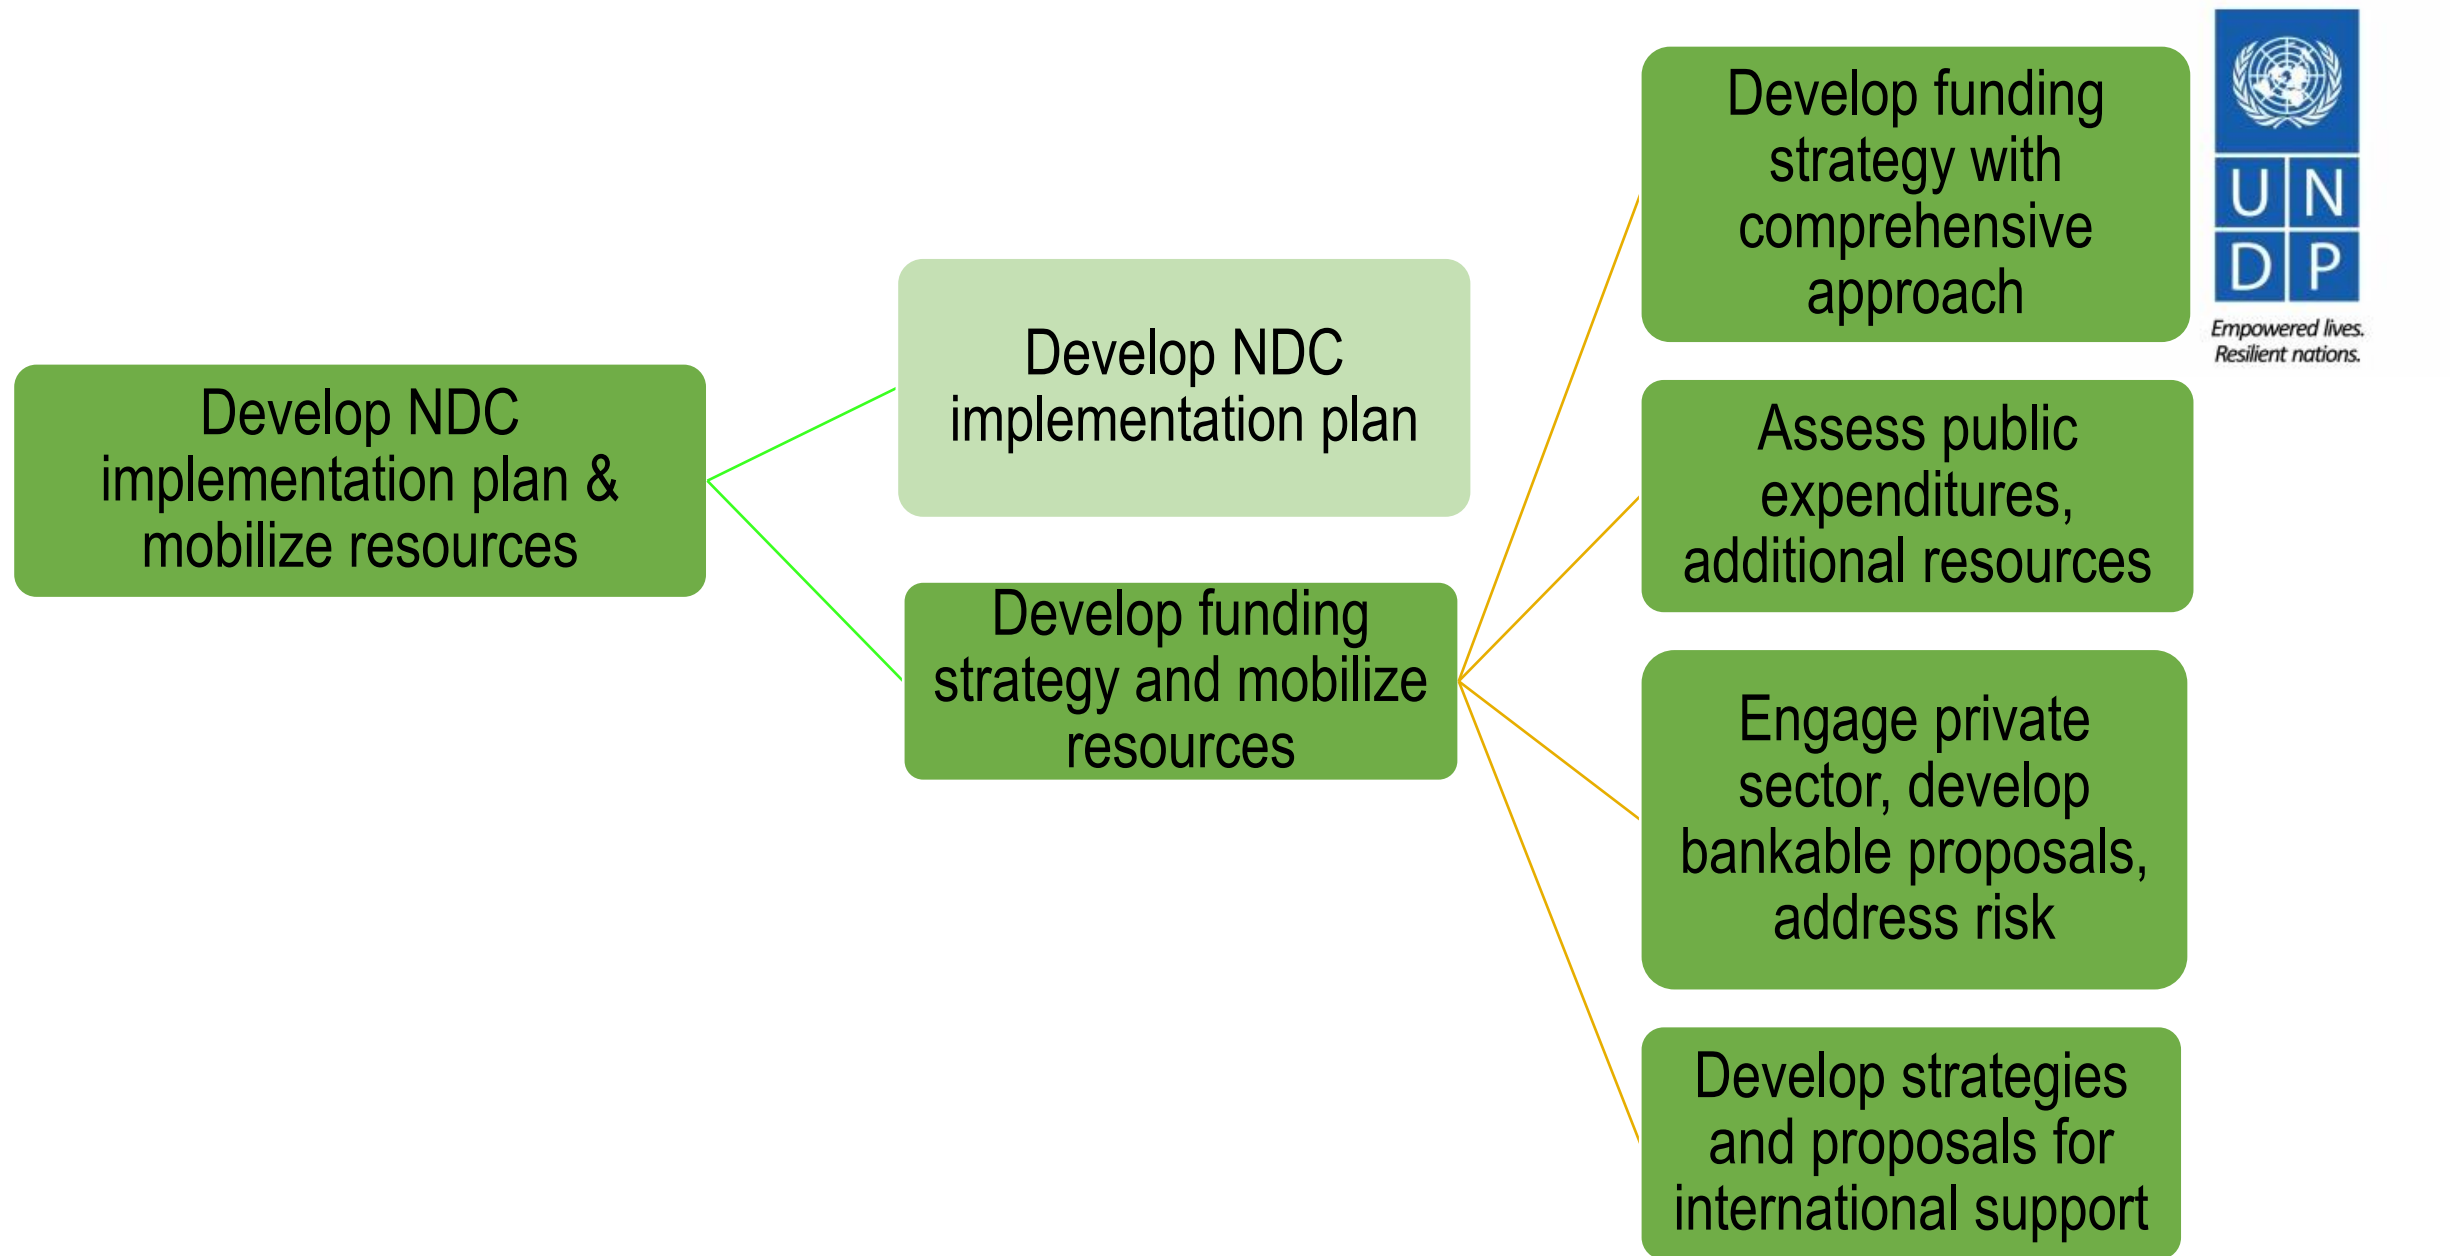

Colombia's NDC Implementation Planning

- Building awareness and support
 - Conscious effort to secure broad participation
 - Identifying champions in local governments, private sector, etc.
- Institutional arrangements and capacities
 - Inter-ministerial commission to coordinate across ministries
 - “Regionalization” effort: work with local/regional governments and stakeholders
- Technical preparations
 - Building on existing inventories, plans, analyses under LCDS
 - 2016 process of sectoral allocation of national mitigation target (-20% from BAU by 2030)

Steps/Stages of NDC Implementation

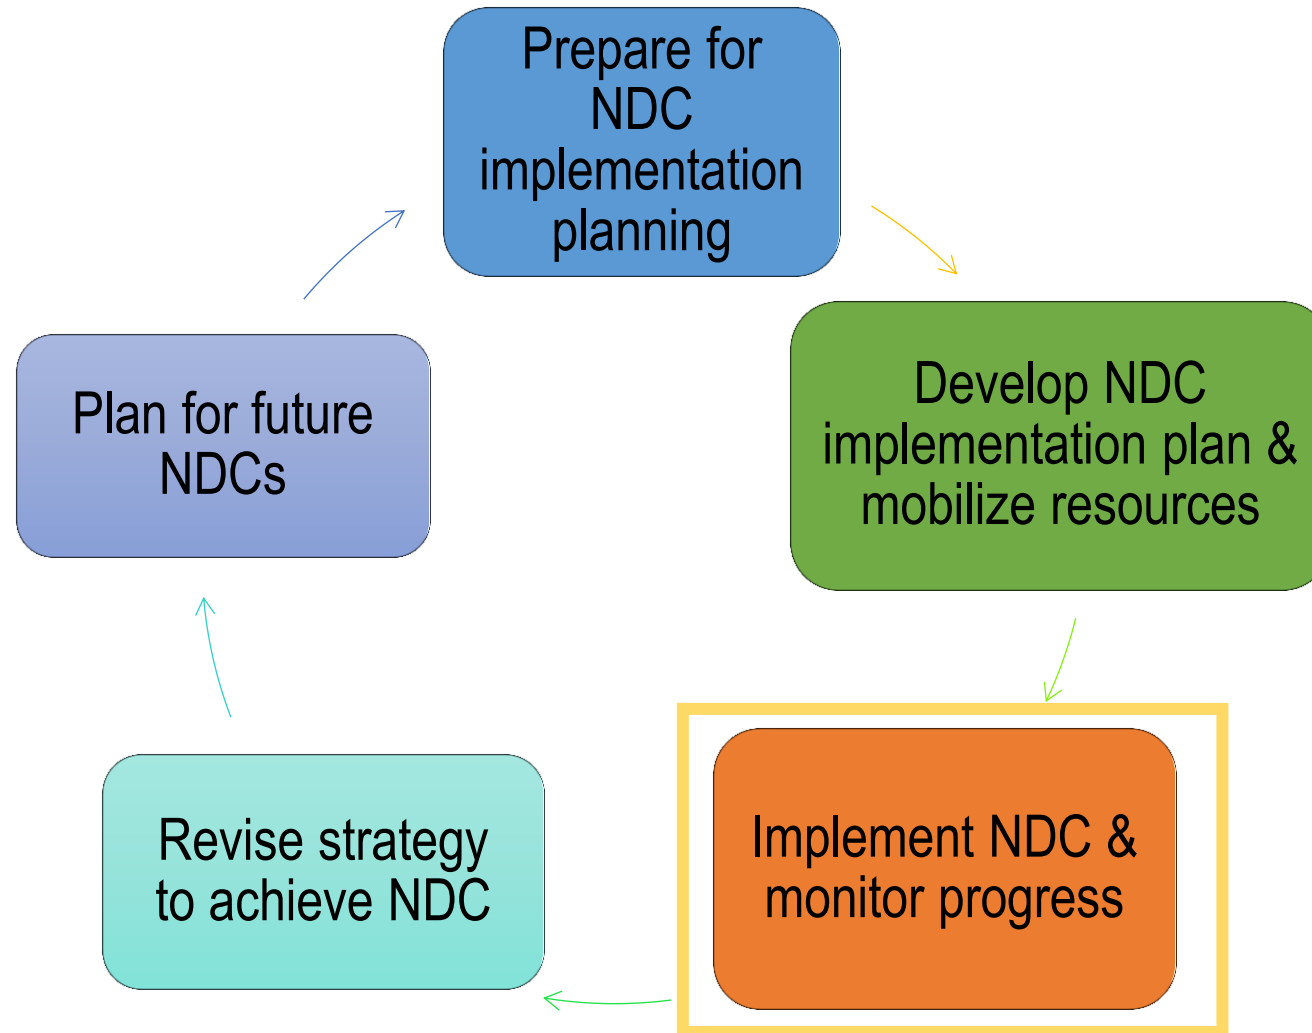

Empowered lives.
Resilient nations.

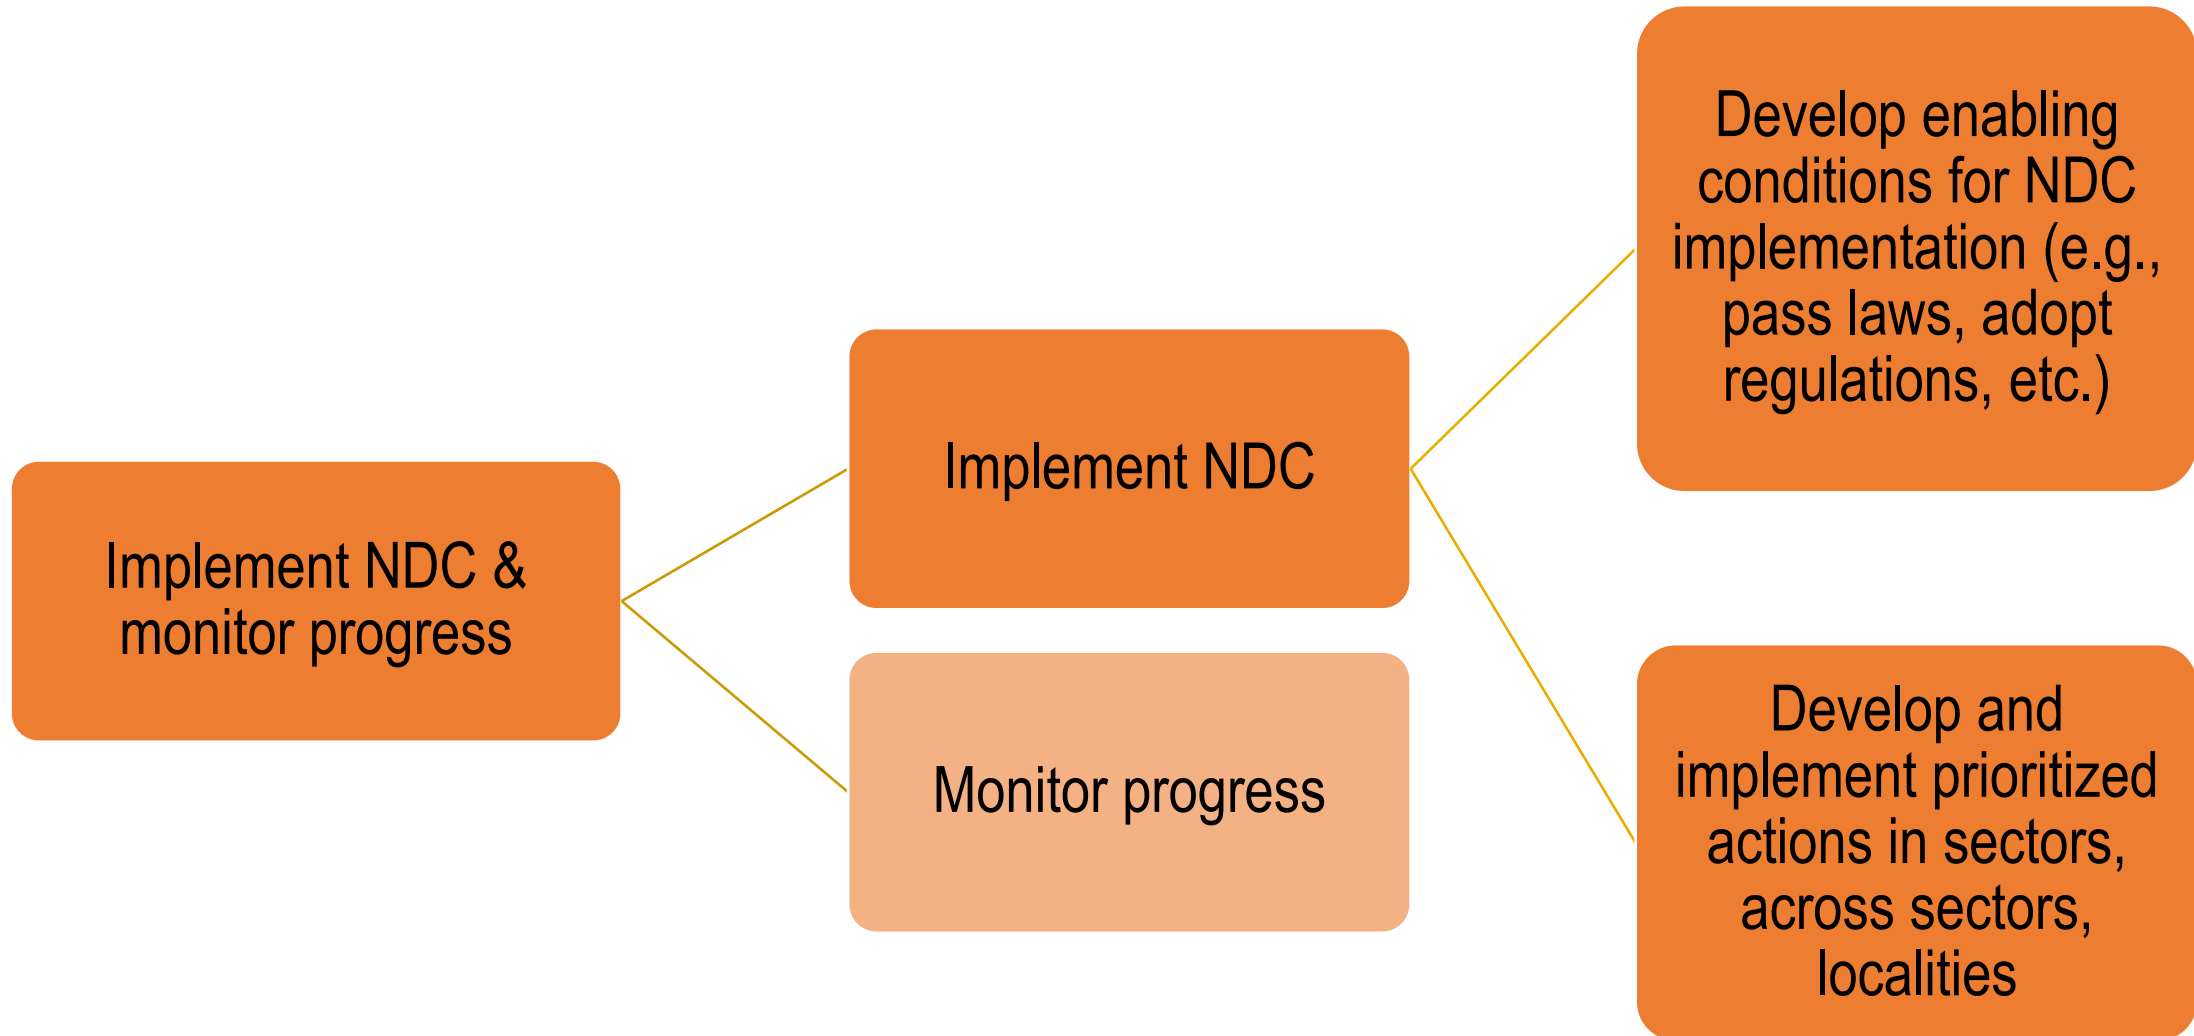

Trinidad & Tobago's Implementation Plan & Resource Mobilization

- Developing implementation plan
 - Currently developing implementation plan that will identify concrete actions and projects (in consultation with relevant stakeholders)
 - Will build on technical analyses for the development of low-carbon development action plans for the power generation, industry, and transport sectors
- Mobilizing resources
 - Conducting a finance needs analysis (and TNA) for NDC implementation
 - Developing projects that will seek funding from national Green Fund, GCF, GEF, other international sources
 - Designing portfolio of projects to be financed by the national budgetary process through the Public Sector Investment Programme
 - Consistent with national policy and mainstreaming efforts

Steps/Stages of NDC Implementation

Implement NDC & monitor progress

Implement NDC

Monitor progress

Create mandates (e.g., data collection)

Develop monitoring plan

Create/strengthen systems for collecting data and tracking progress (build on existing systems)

Collect and analyze data

Transparently report domestically and internationally

Empowered lives.
Resilient nations.

Monitoring Plan in South Africa

Empowered lives.
Resilient nations.

Implementation of the M&E System in Three Phases

Phase 1 (to end 2016) > Setting-up

- » Setting up & piloting of the web-based platform
- » Setting up the legal & regulatory framework
- » M&E system institutional setup
- » Mapping climate monitoring systems & stakeholders
- » Refining adaptation M&E networks
- » Developing MRV guidelines
- » Produce 1st & 2nd annual M&E reports

Phase 2 (2017-18) > Operationalization

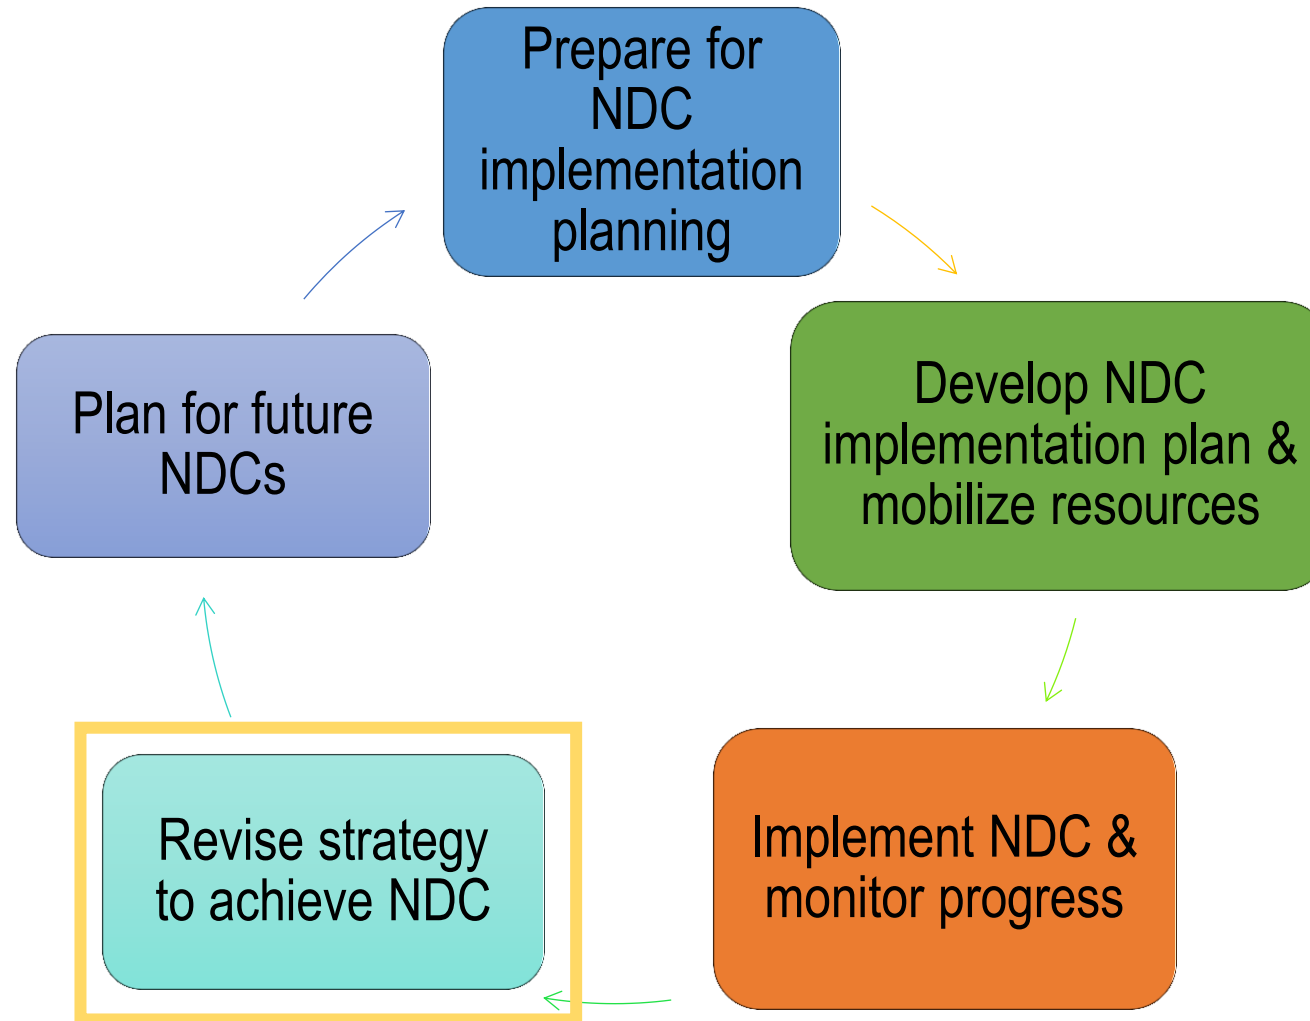

- » Web-based platform operationalization & training
- » Adoption of standardized MRV methods
- » Testing of adaptation data-sharing networks
- » Learning and documentation of lessons
- » Improvement of annual M&E reports; publication of the 3rd & 4th Annual reports

Phase 3 (2019-20) > Refinement & inalization

- » System improvement based on lessons learnt
- » Setting up a fully operational system structure
- » Accuracy, completeness & consistency pursued
- » System outcomes fully integrated into decision-making processes
- » Publication of the 5th & 6th annual M&E reports

Source: Own compilation.

Steps/Stages of NDC Implementation

Revise strategy to meet current
NDCs

Amend implementation plan based on
observed impacts

Change scope or impact of existing
actions and policies to be more effective

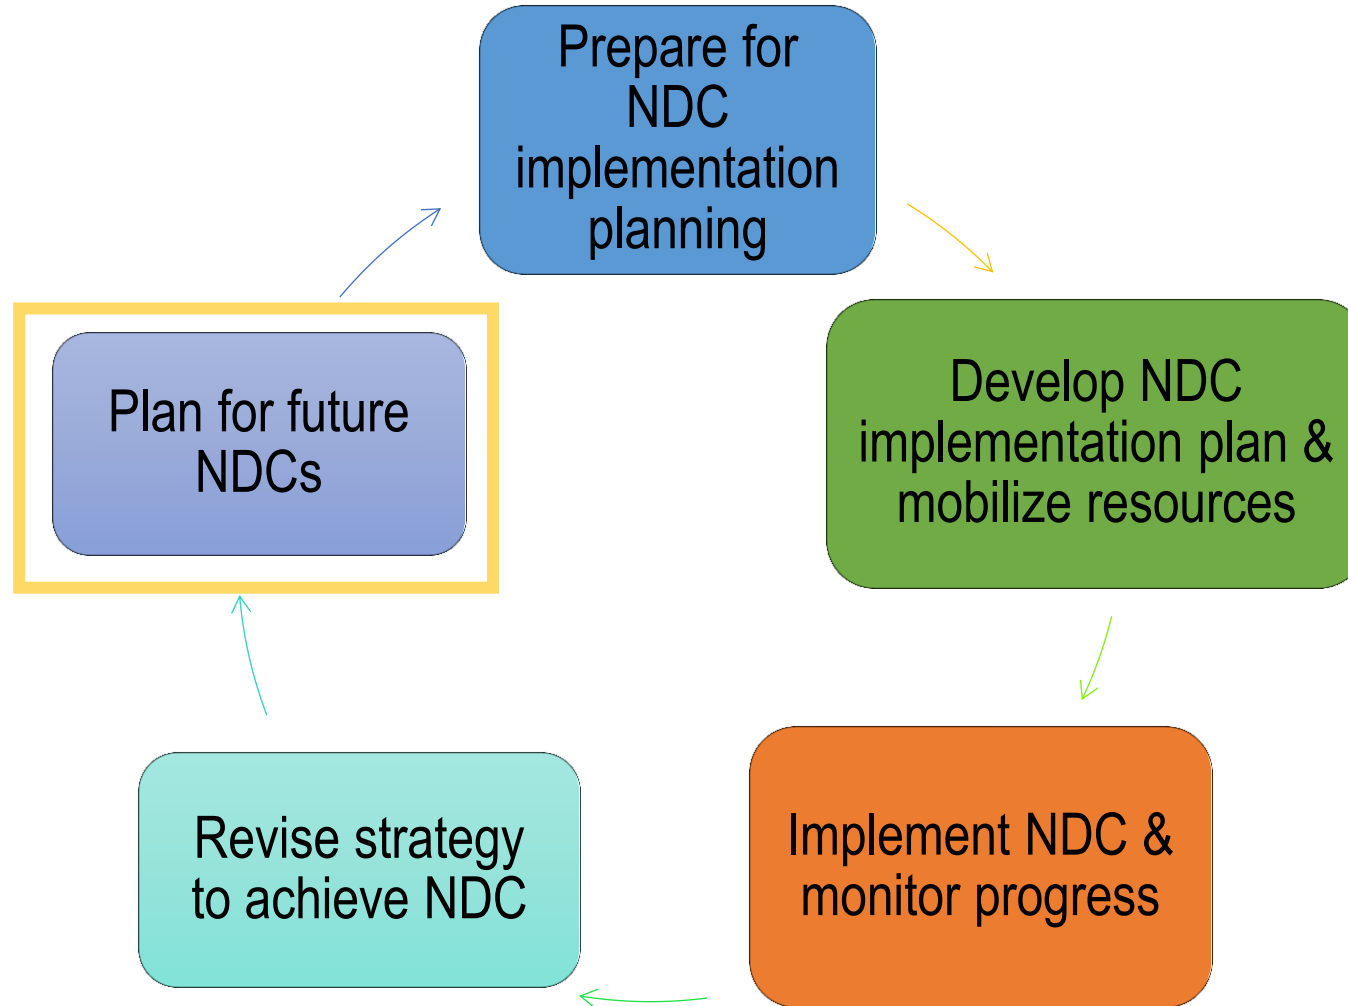

Design new actions and policies as
needed

Source: NYC Mayor's Office and M.J. Beck Consulting, LLC

Steps/Stages of NDC Implementation

Plan for future NDCs

Institutionalize planning for future cycles (every 5 yrs)

Develop or update long-term mitigation strategy (e.g., mid-century LEDS per Paris)

Update NAPs or long-term adaptation planning

Systematically assess additional mitigation and adaptation options

Norway's INDC Planning Based on Long-Term Strategies

Figure 0-3 Possible emission trajectories up to 2050. (M1=mitigation package 1, M3=mitigation package 3)
