Enhanced Transparency Framework (ETF): Article 13 of the Paris Agreement establishes an ETF for climate action (mitigation and adaptation) and support. Under this framework, all Parties are required to report regularly on their GHG emissions and on the progress in the implementation and achievement of their mitigation contributions in their NDCs. The ETF is meant to build on and enhance the existing transparency arrangements under the Convention and under the Kyoto Protocol. In the case of developing countries, this means building on the existing experiences in the preparation of national communications (NCs), BURs and participation in the international consultation and analysis (ICA) process.
